QlikView Training, Delivered by Experts

Our training courses ensure you can confidently design and build attractive, efficient and scalable applications. Our trainers are all senior Qlik consultants; when they are not delivering training they are at the coal face, delivering inspired solutions for our clients.

The Right Training for You

We offer QlikView training in a variety of formats and can work with you to tailor the exact fit for your requirements.

We offer online virtual-classroom training sessions, in person training courses at various venues and workshops where you learn by collaboratively building applications that will be of direct use to your organisation.

Call us to discuss which training method works best for you.

Example Course Structure

Here is an example of a typical instructor-led course.

Day 1   We get to know the product loading data from several sources. We look at modelling and design best practice.

Day 2   We discover more methods of displaying data and which ones are most appropriate for different audiences.

Day 3   We explore advanced expressions and data transformations.

Day 4   We tackle Set Analysis expressions and Section Access security.

Beyond the Ordinary

As we use expert consultants to deliver training we go well beyond the course material. During a workshop this may allow you to drill into a specific business requirement during the course, and in a classroom setting the material may be illuminated with anecdotal extras from the trainer's real-world experience on customer sites.

As a company we are passionate about delivering inspired solutions, and through our training courses we always look to share that passion and deep knowledge.
